We are looking for a Business Analyst who as part of Product Management team will be the vital link between our information technology capacity and our business objectives by supporting and ensuring the successful completion of analytical, building and deployment tasks of our software product's features.

As a Business Analyst:

You Have:

- A self motivated team with high energy levels.
- A great office with a cool culture.
- The freedom to do things your way, as long as you have a solid reason.

Your Responsibilities:
- Analysing a broadly-defined area using functional decomposition to define high-level Epics and Stories in the Product Backlog
- Writing user stories as per SMART/INVEST guidelines so that they are clear and concise and are easy to understand and implement by the development team
- Define configuration specifications and business requirements
- Represent the business requirements as detailed Wireframes, Activity, Data Flow, and Use Case diagrams
- Help Design, Document and maintain system processes
- Perform requirement analysis on various products available and communicate the same to the management on a timely basis.
- Preparation of SRS documents
- Work closely with the UI/UX team to oversee and signoff Prototypes and final designs.
- Delivering elements of systems design, including data migration rules, business rules, wireframes, or other detailed deliverables.
- Report on common sources of technical issues or questions and make recommendations to Product team
- Act as a bridge between the development and business teams
- Communicate key insights and findings to Product team
- Constantly be on the lookout for ways to improve monitoring, discover issues and deliver better value to the customers.

Your Qualities:

- Previous experience in Business / Systems Analysis
- Proven experience in eliciting requirements
- Experience in analysing data to draw business-relevant conclusions and in data visualization techniques.
- Experience in UML Diagramming and using Wireframing / Prototyping tools.
- Expertise on User acceptance testing will be an added advantage.
- Excellent written and verbal communication, including technical writing skills.
- Proficient in using MS Office, industry standard Wireframing / Prototyping tools
- The ability to conduct cost/benefit analysis.
- Analytical and conceptual expertise
- Understanding of systems engineering concepts.
